

Lab 2

Problem statement #3 - Campus Placement & Internship Pipeline

1. Creating space

Name your space

Required fields are marked with an asterisk *

Name *

How your space is managed *

 Company-managed 

[Learn more about space types](#)

☐ Share settings with an existing space

Key * 

Template

See details

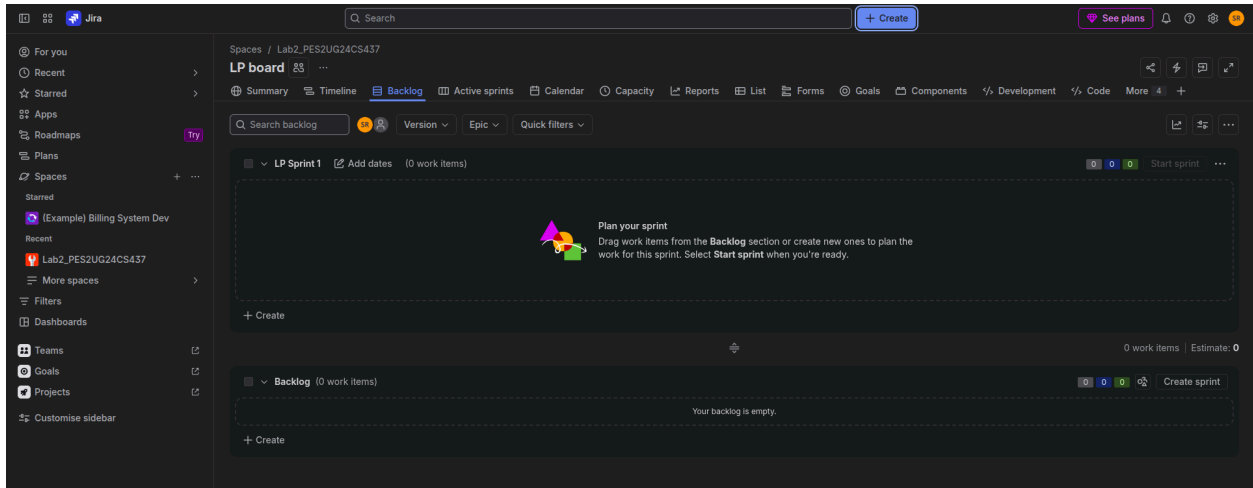

Scrum

 Jira

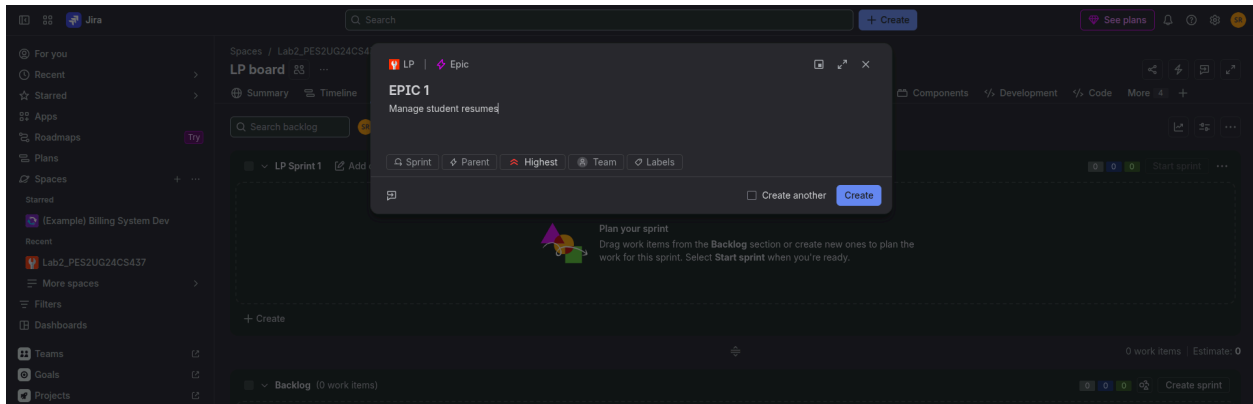

Sprint toward your project goals with a board, backlog, and timeline.

The backlog screen after creating the space.

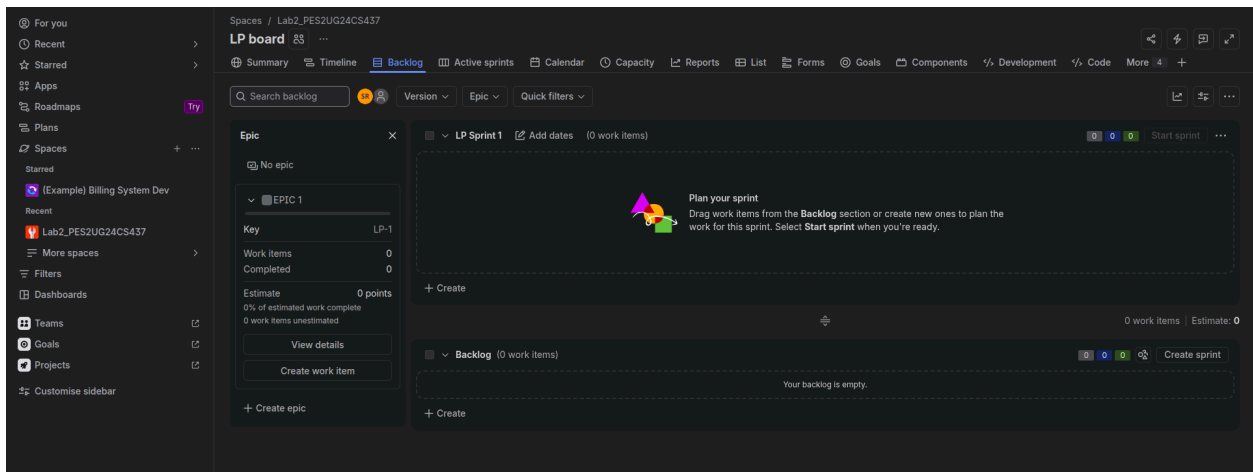

2. Creating epics

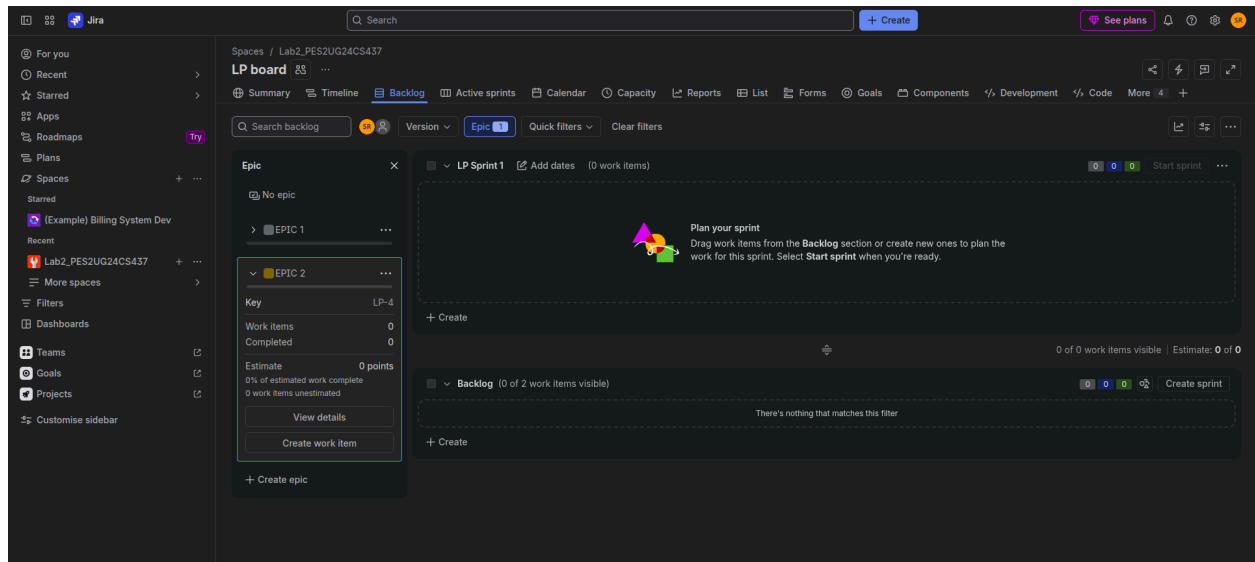

Making first epic for student resume management.

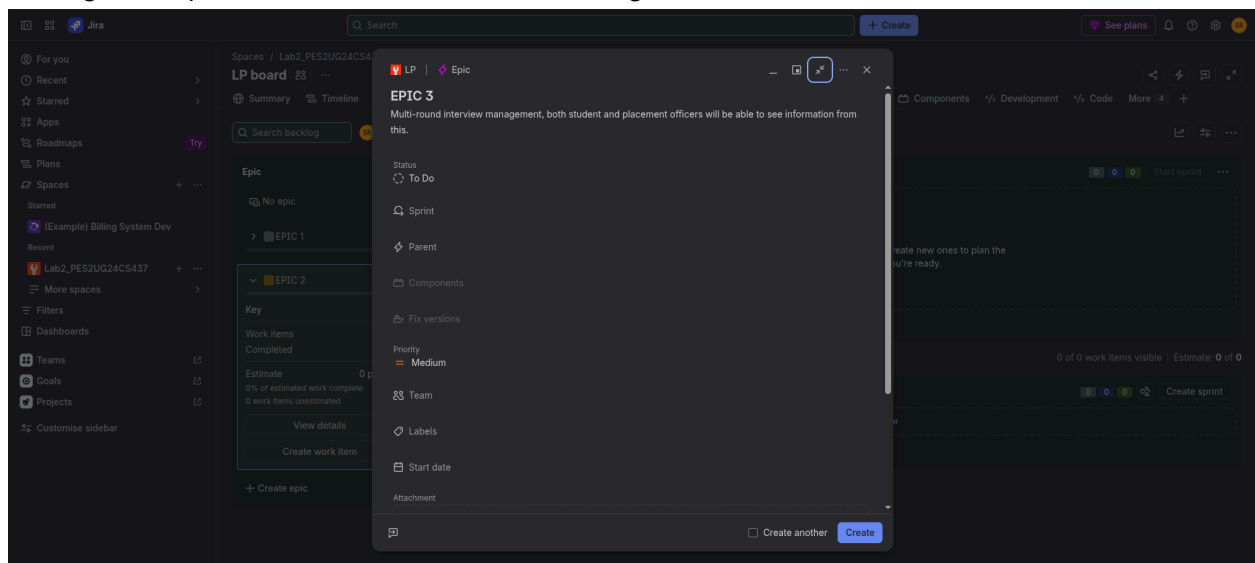

Viewing epic after creating it (clicked e key).

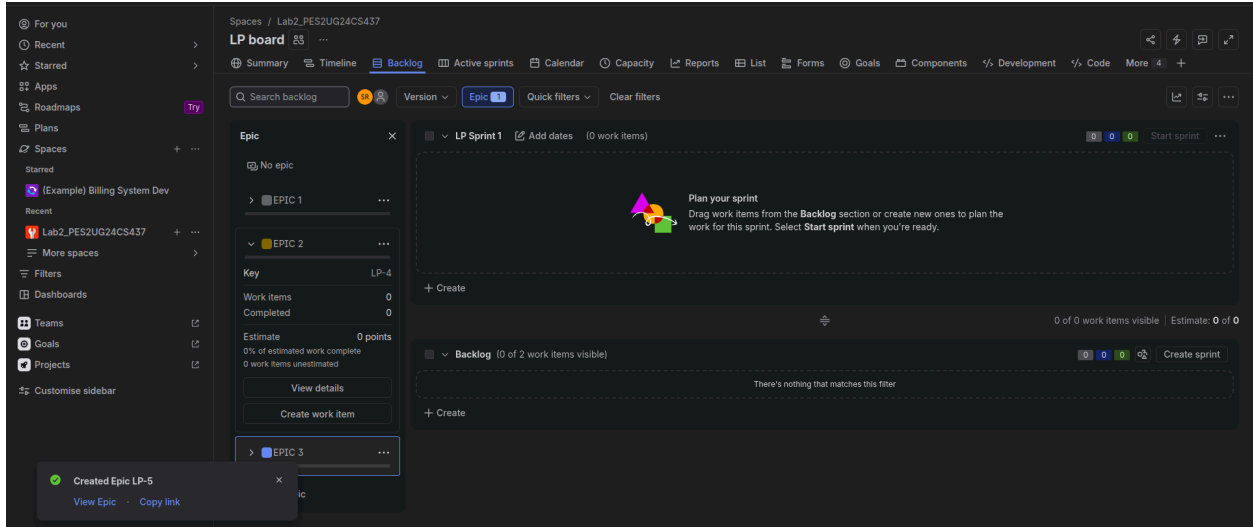

Making second epic for company offer management. I forgot to take a screenshot while doing this, so this is the view after creating it.

Making third epic for multi-round interview management.

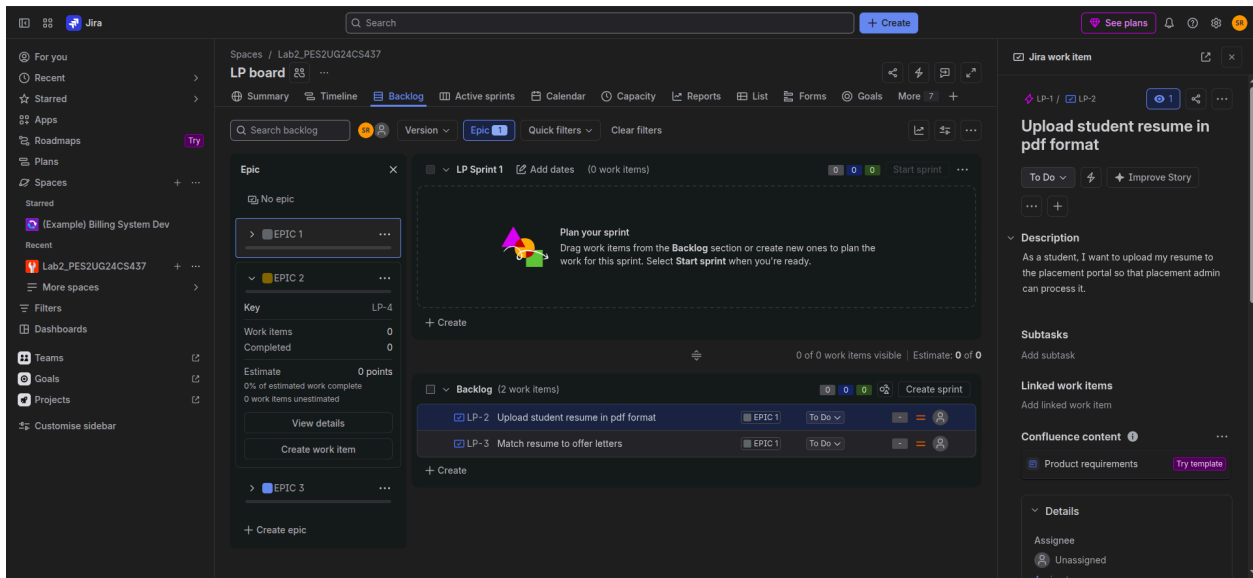

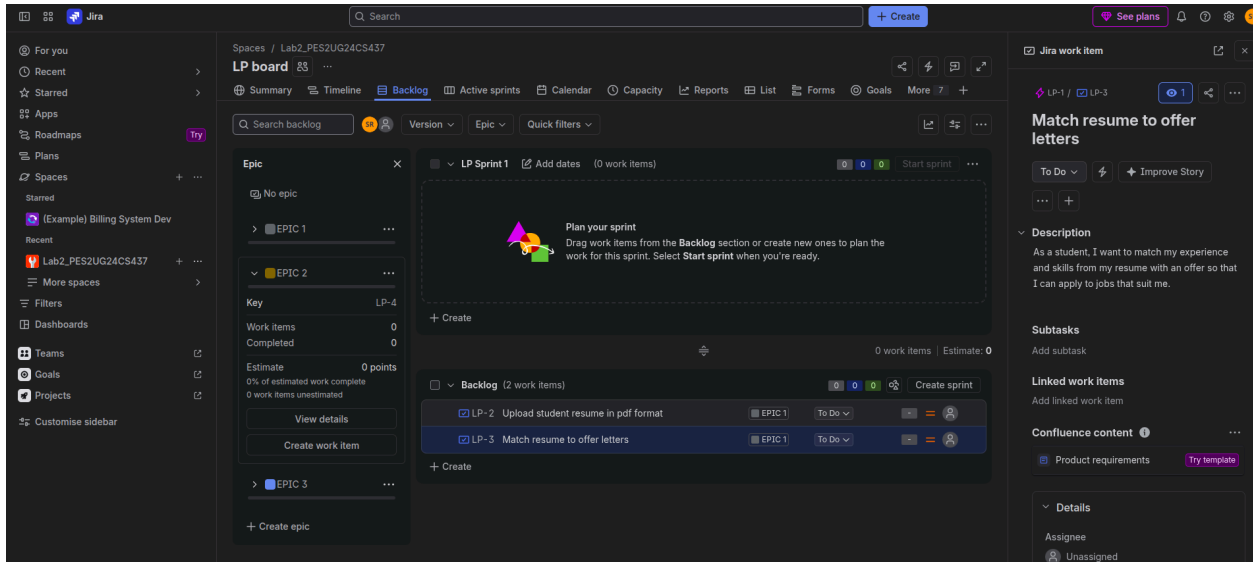

3. Creating user stories under epics

Creating stories under student resume management. I didn't take screenshots while doing this, so instead I have posted a screenshot with the story details on the side.

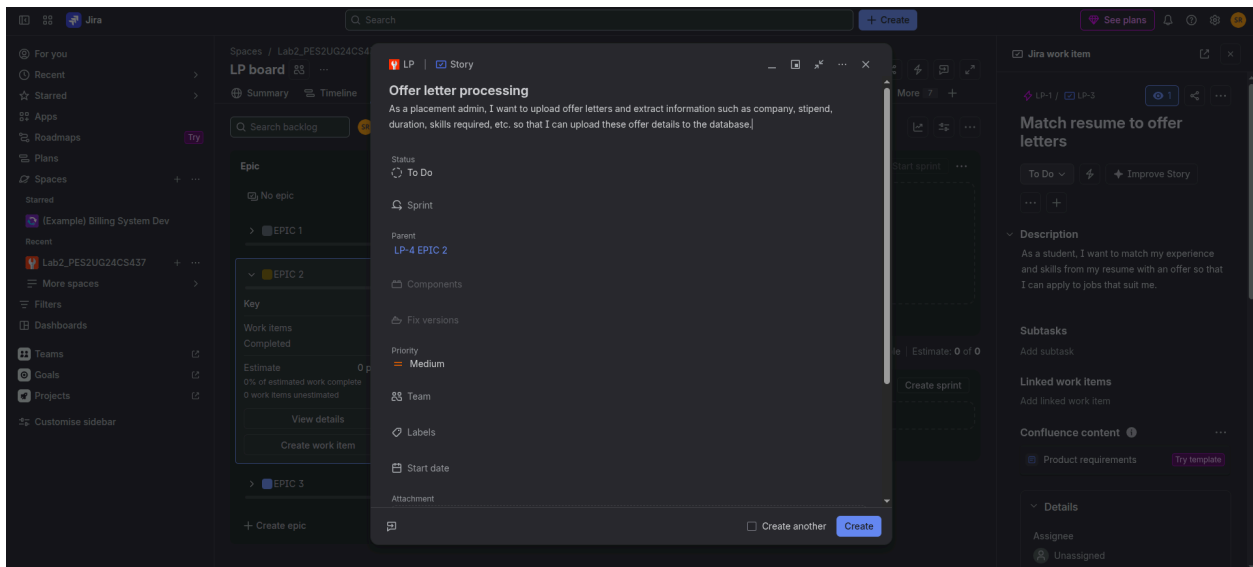

Below: user story for uploading student resumes in pdf format.

Below: user story for matching student resume to placement offers.

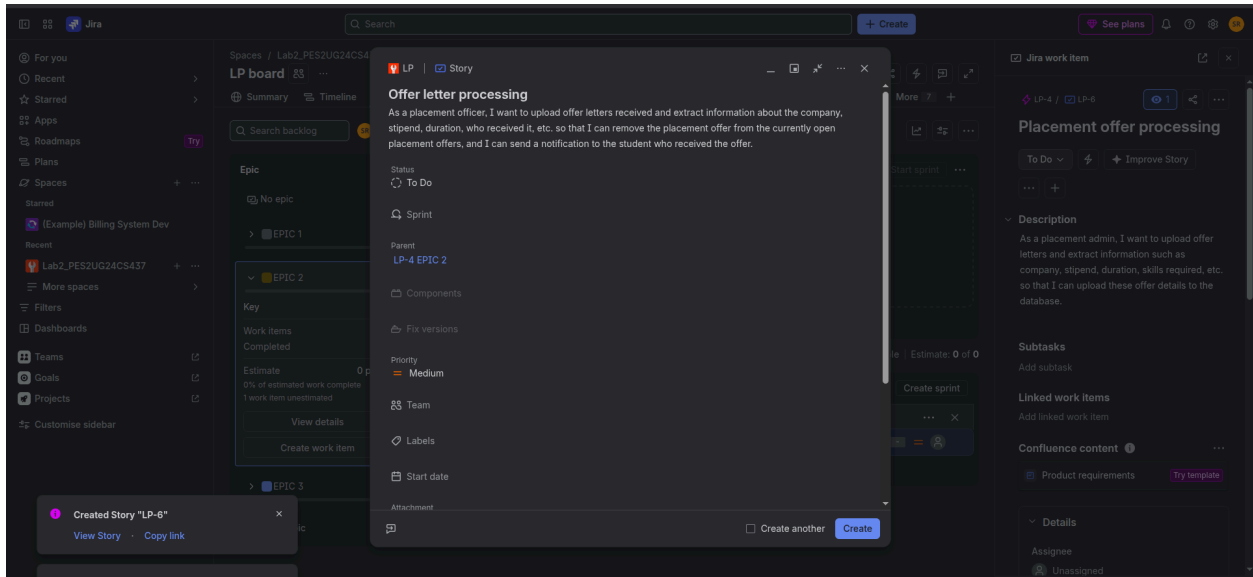

Creating stories under company offer management.
Below: for processing information about currently open offers.

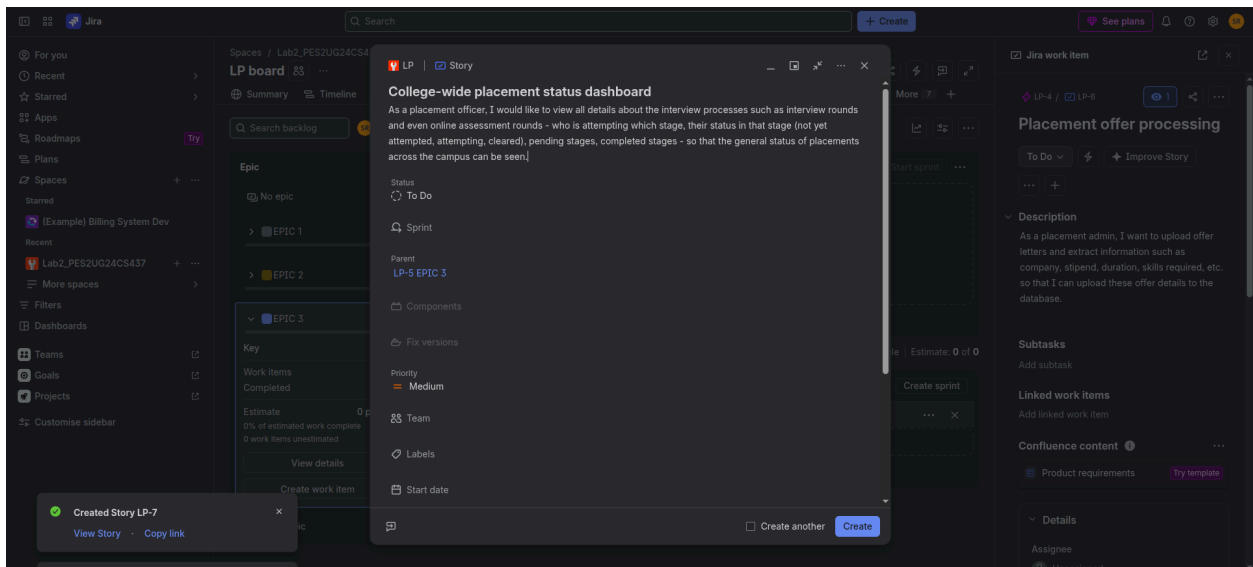

(I changed the name of the above story to placement offer processing later.)

Below: for processing information from offer letters to determine which placement offer has been taken and by who.

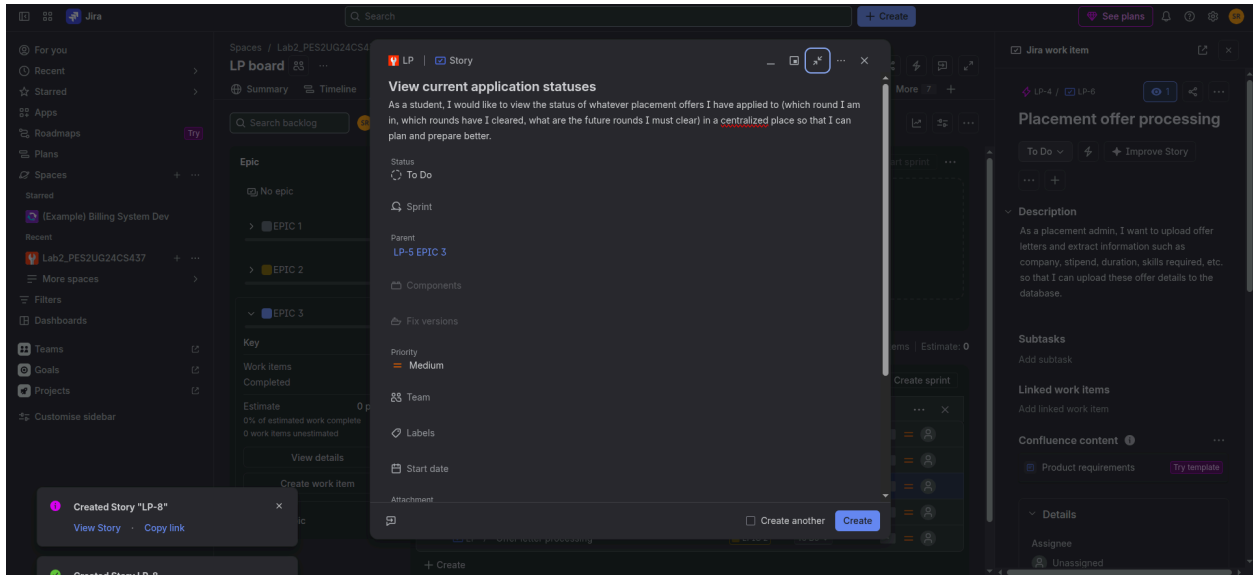

Creating stories under multi-round interview management.

Below: creating a dashboard to view college wide information about placements. Meant for placement officers.

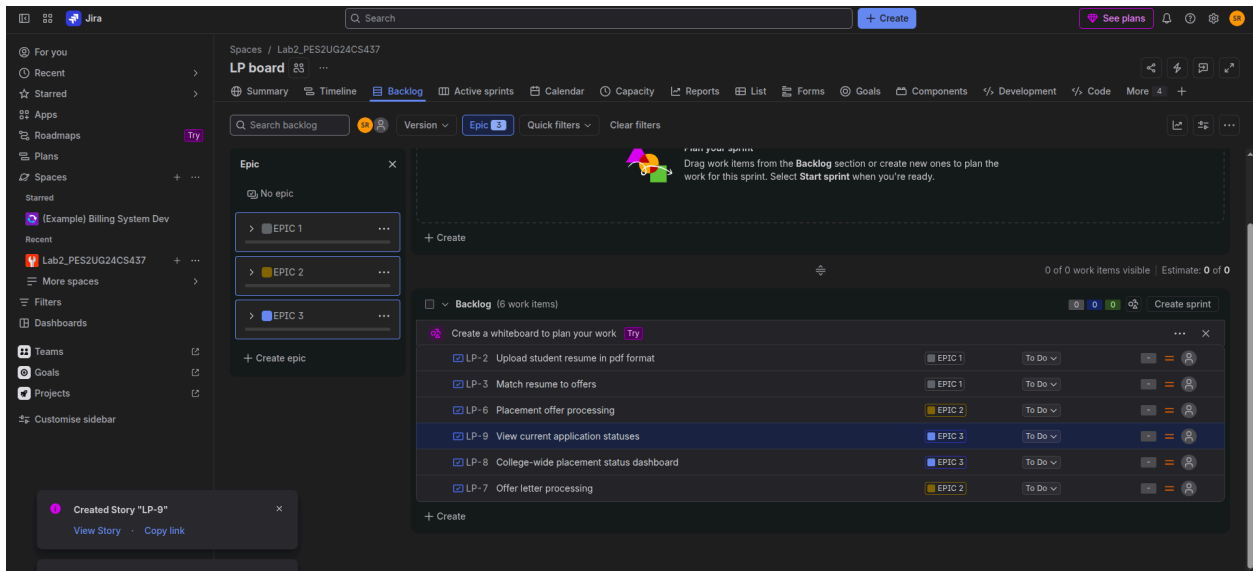

Below: Creating a page where students taking part in placements can view the status of all their applications and processes in one place.

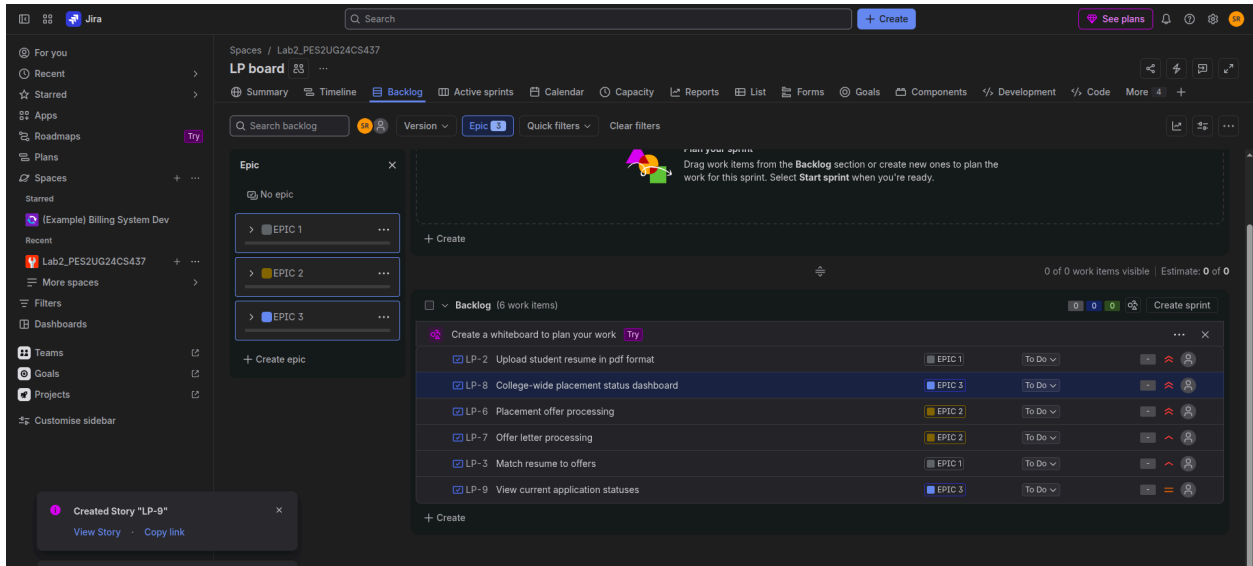

4. Prioritize the backlog

Before prioritizing

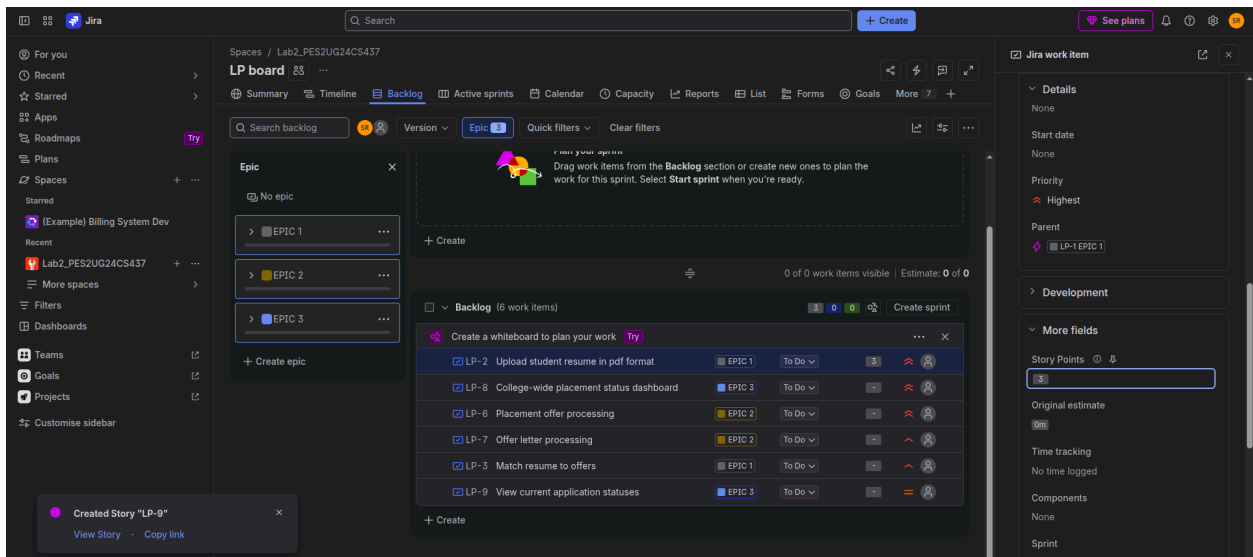

After prioritizing

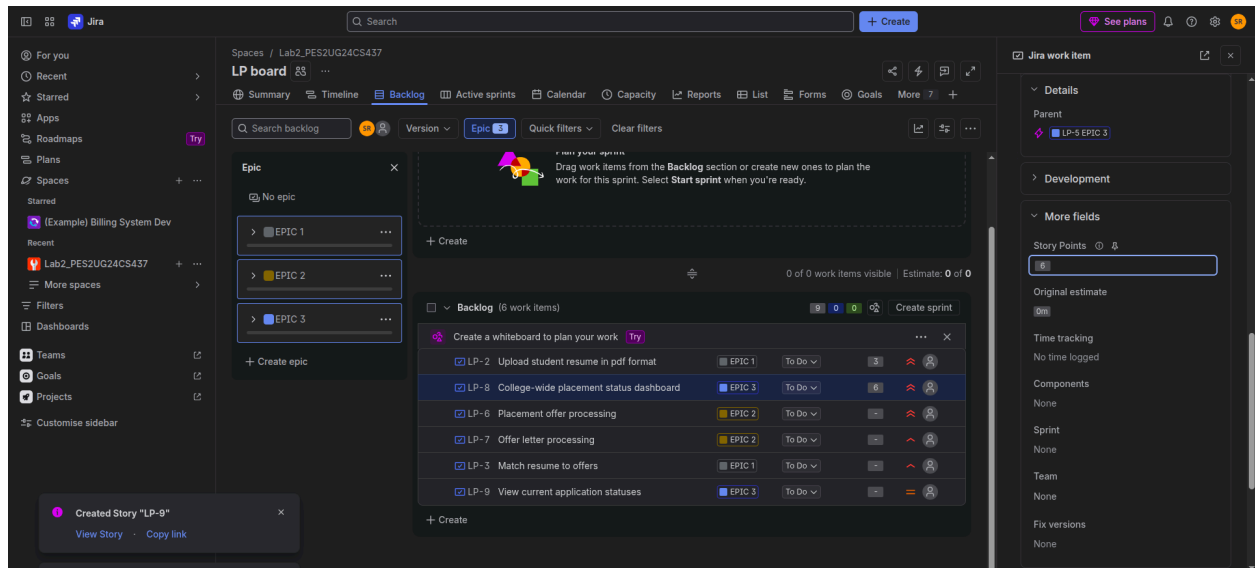

5. Assign story points

I am assuming story points from 1 to 10.

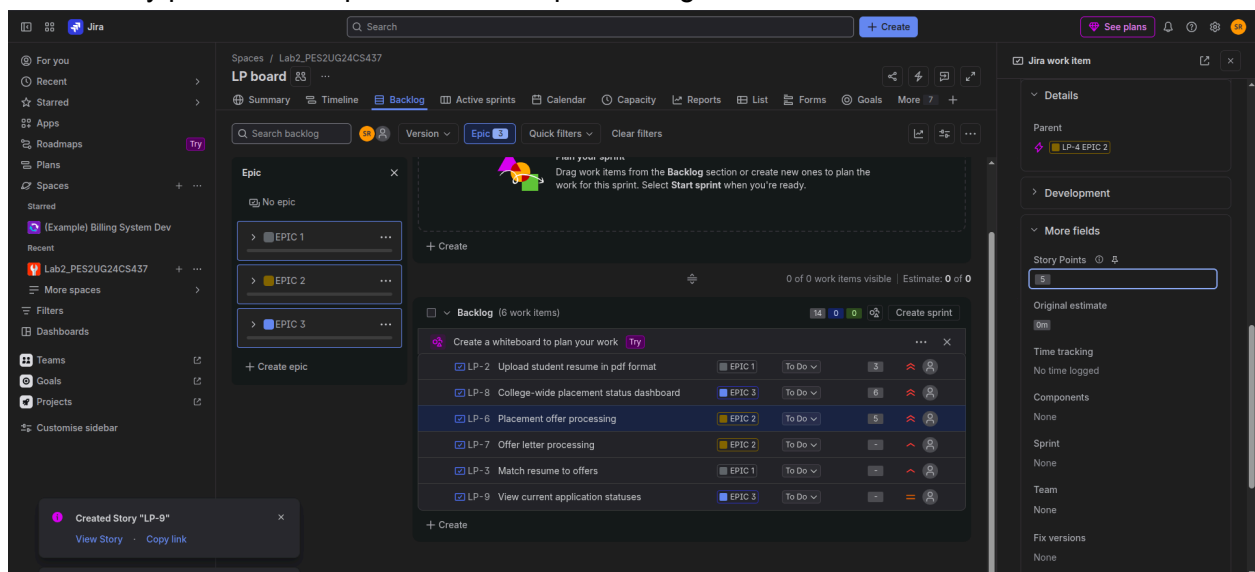

Added story points of 3 to upload student resume in pdf format.

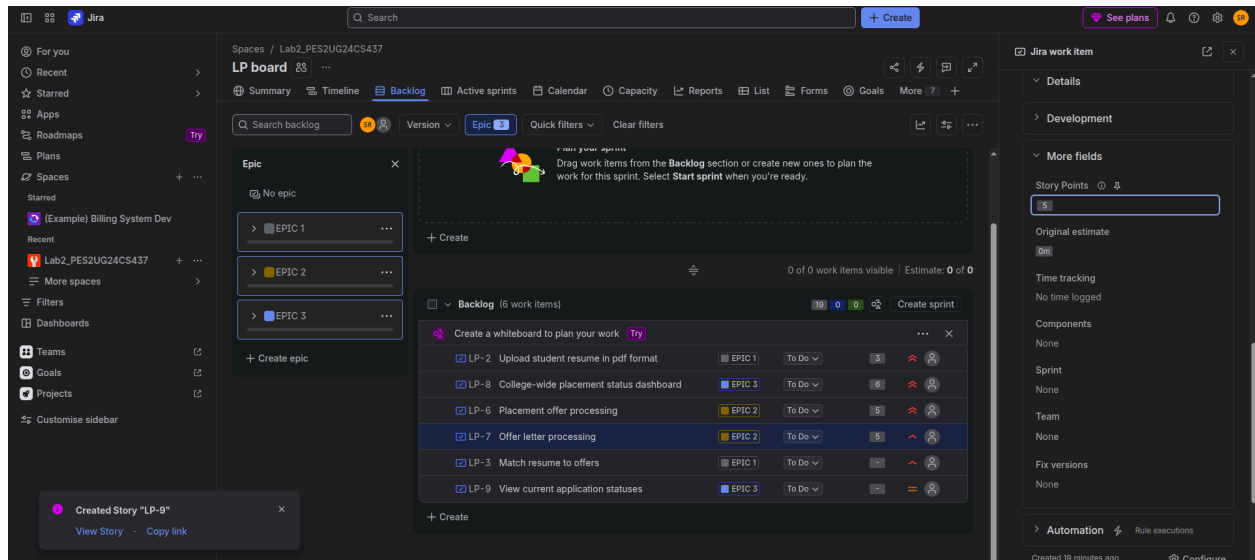

Added story points of 7 to college-wide placement status dashboard.

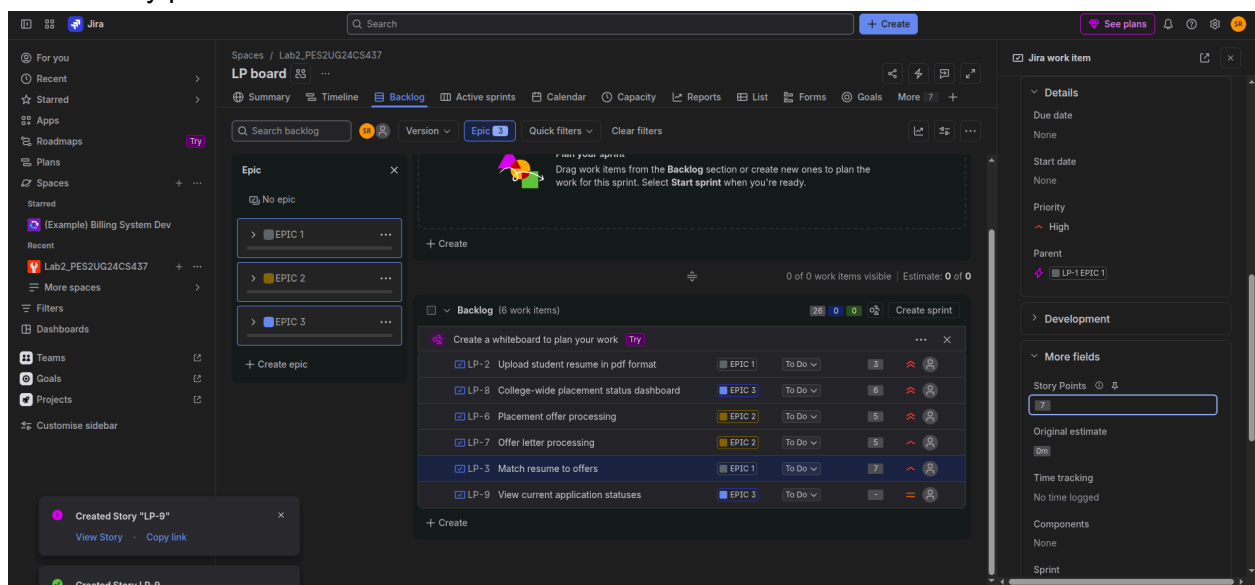

Added story points of 5 to placement offer processing.

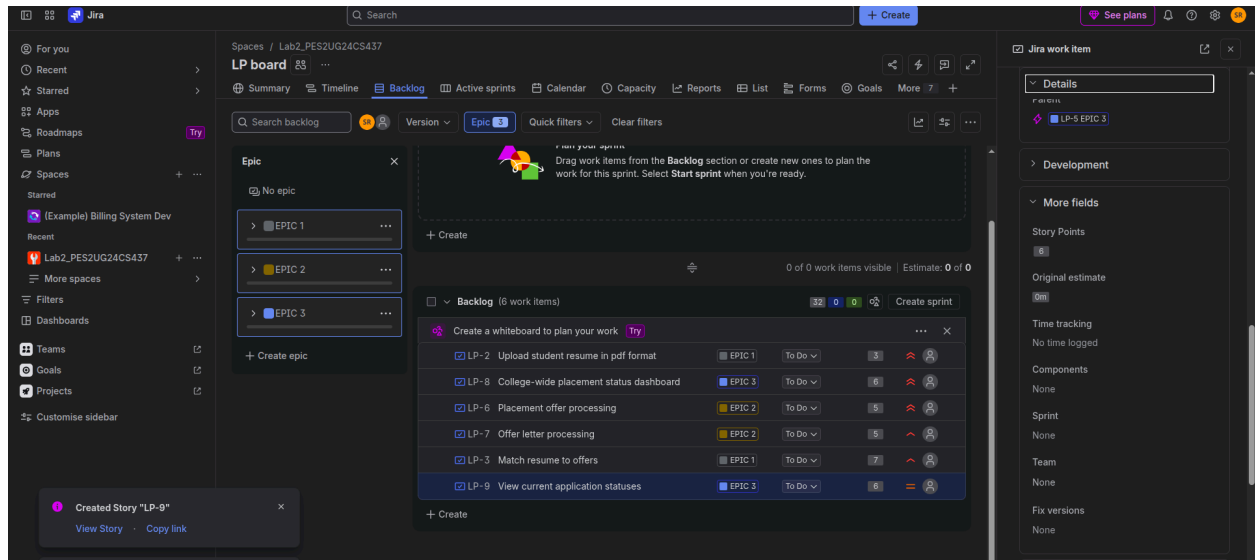

Added story points of 5 for offer letter processing.

Added story points of 7 to match resume to offers.

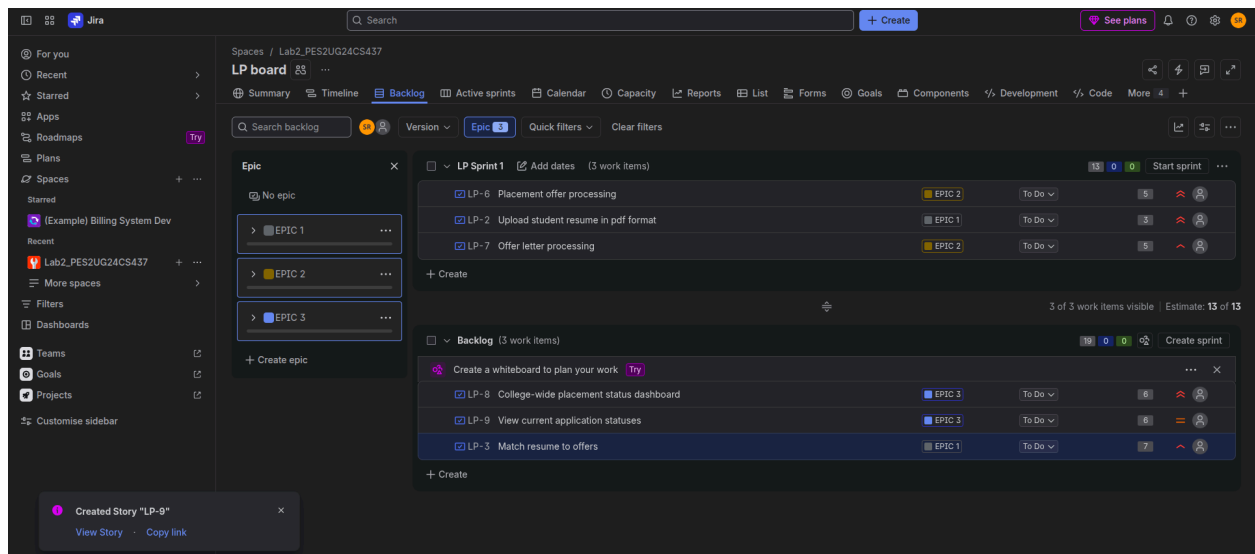

Added story points of 6 to view current application statuses.

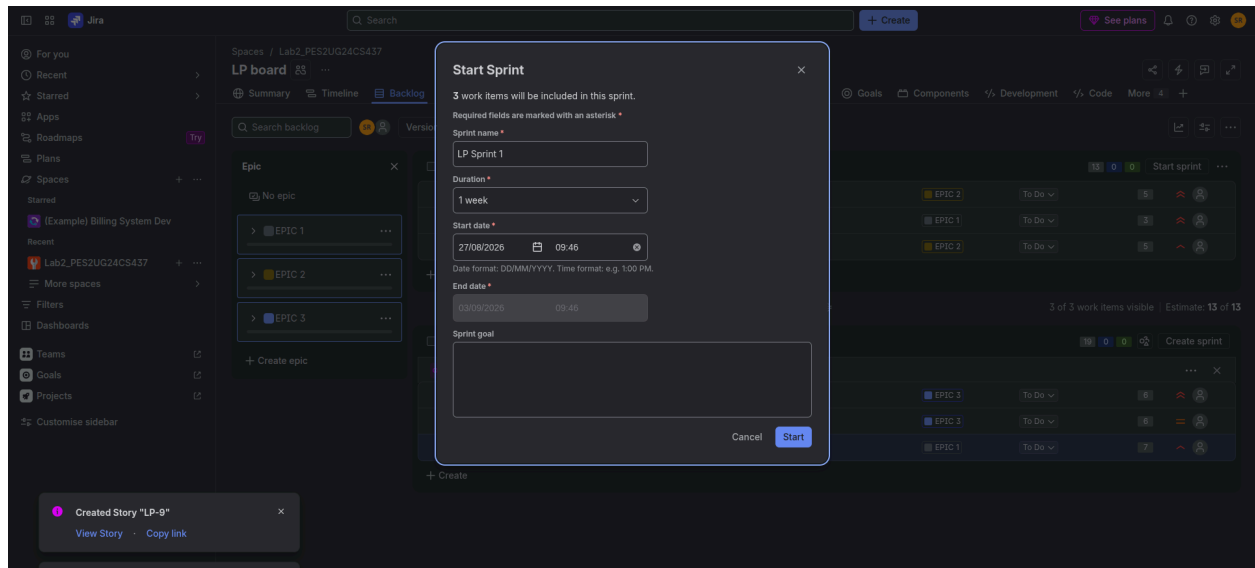

6. Run your sprint

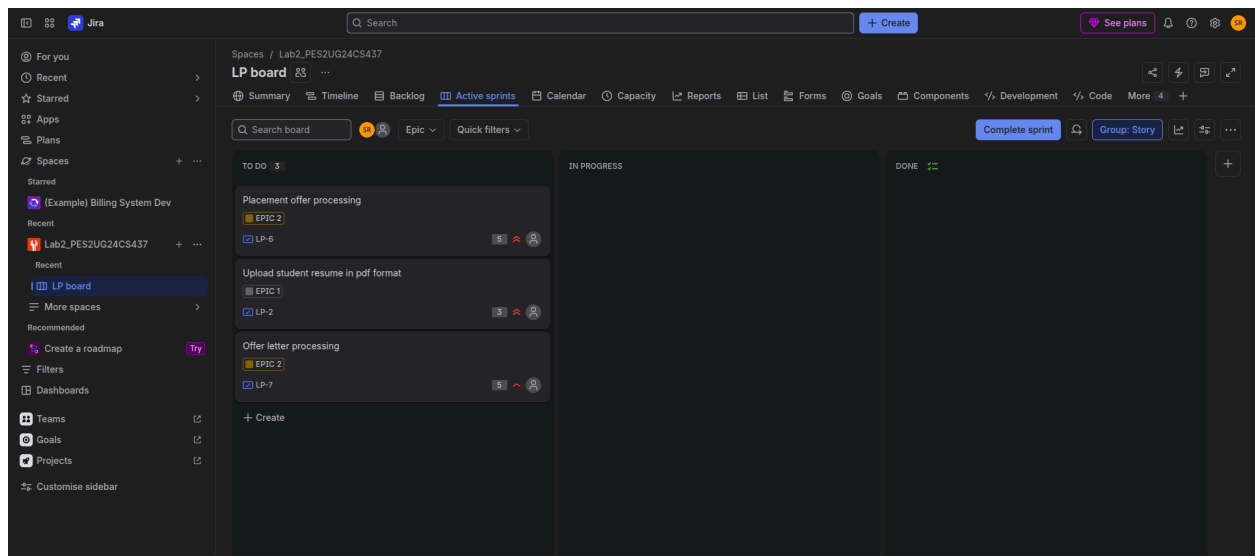

Moving backlog items to sprint.

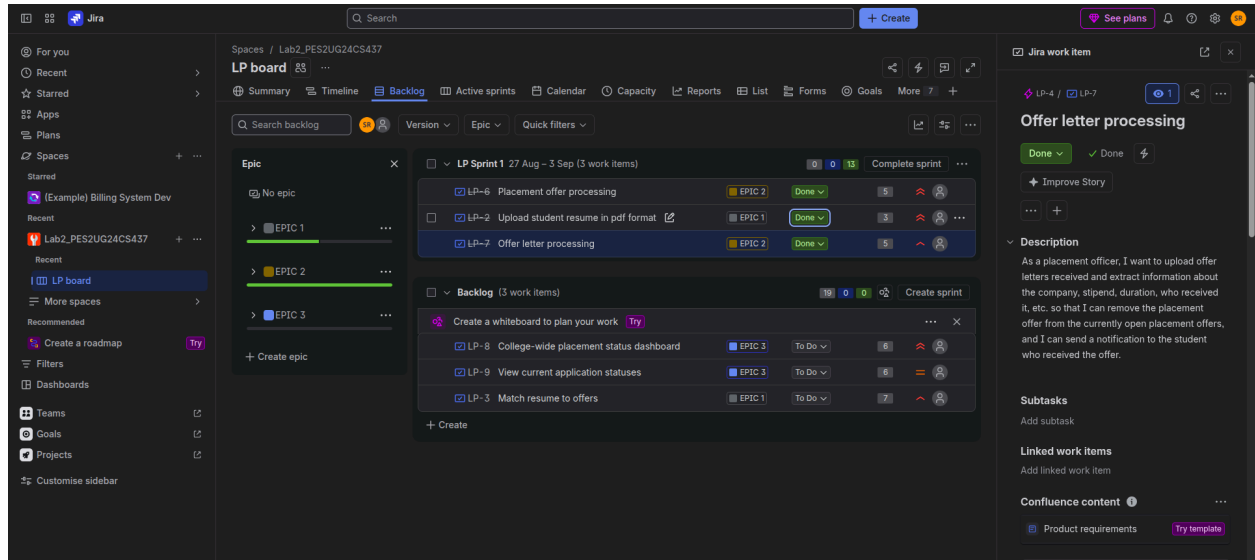

Create the sprint.

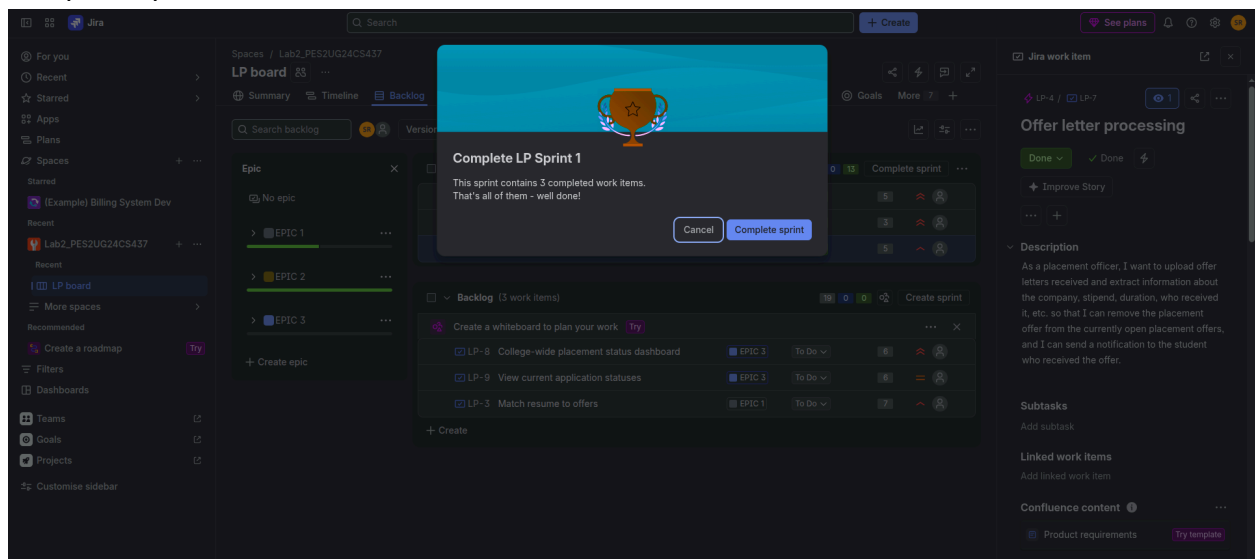

View sprint on active sprints dashboard.

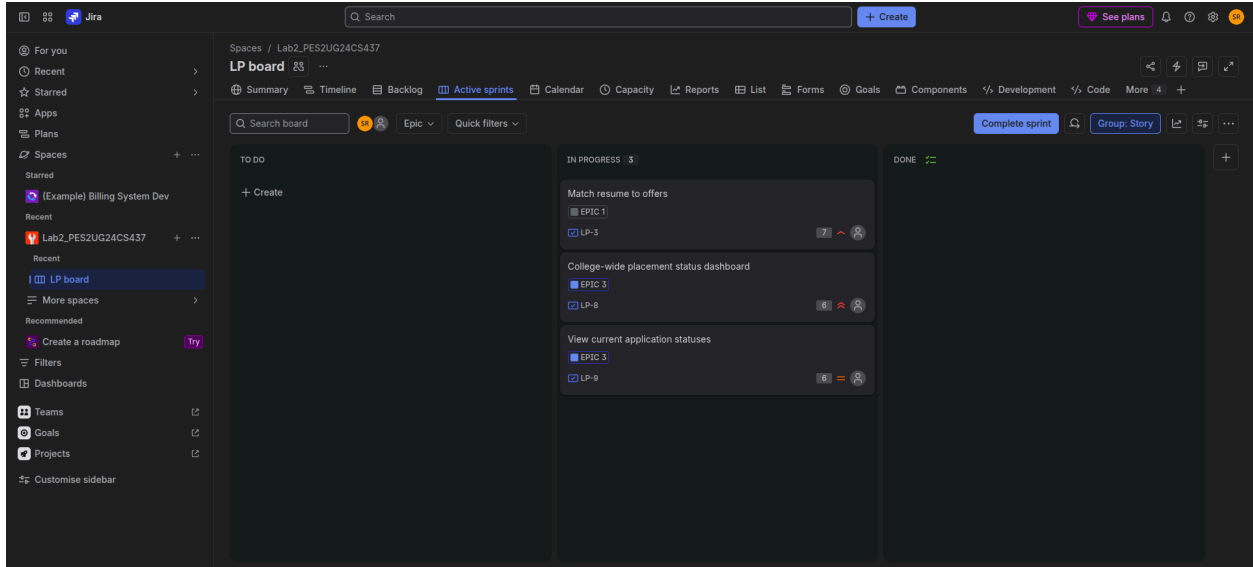

Moved the stories to in progress and then done.

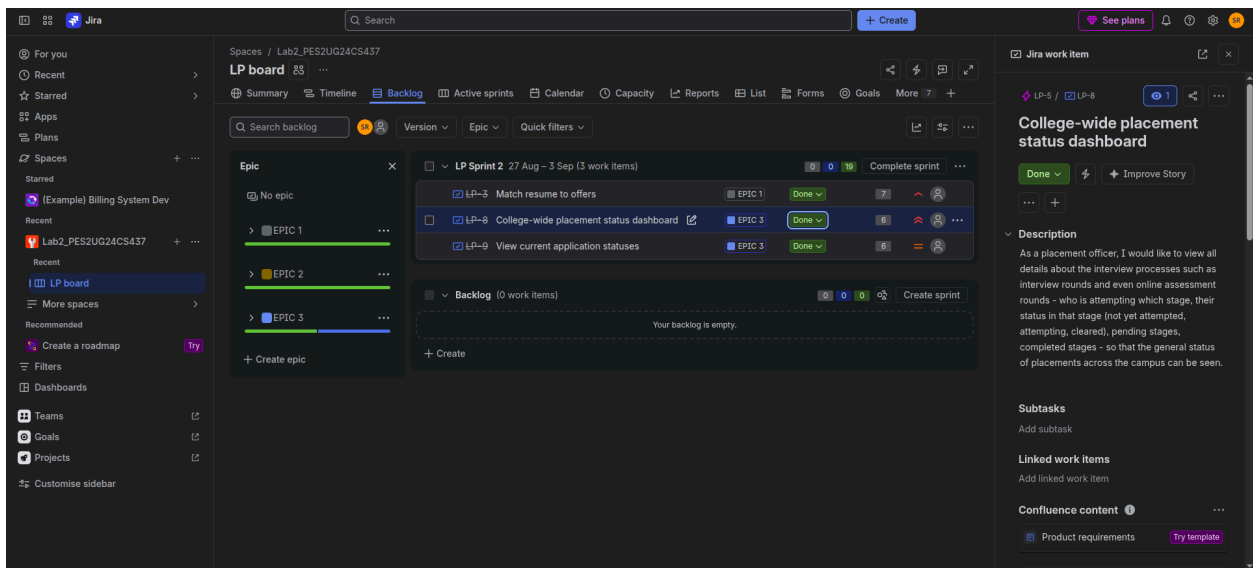

Complete sprint.

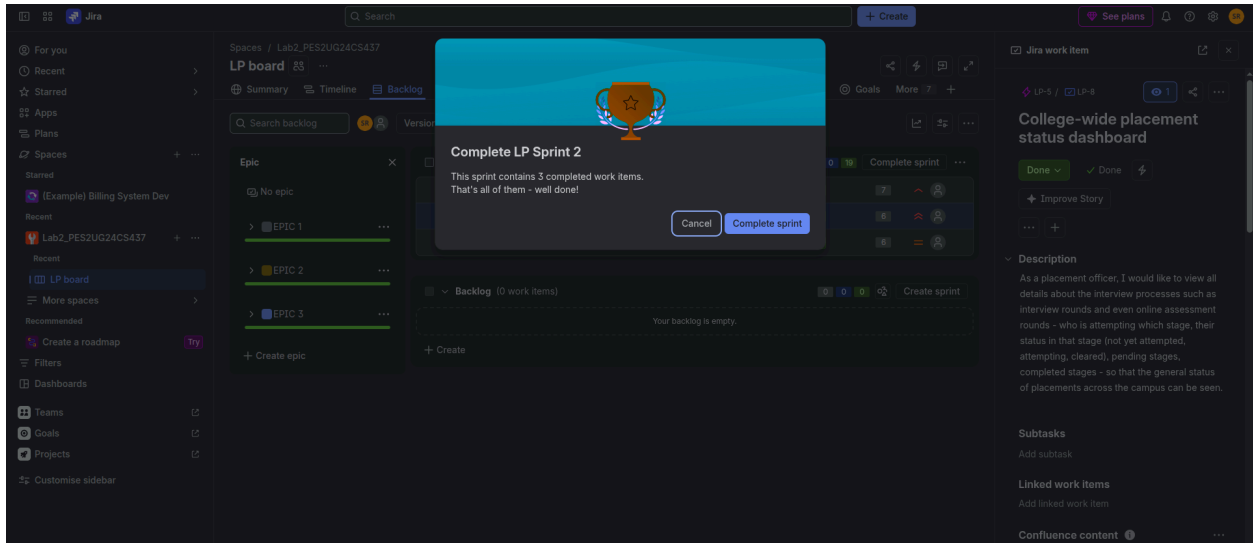

Started the next sprint (forgot to take screenshot). Marked all user stories as in progress.

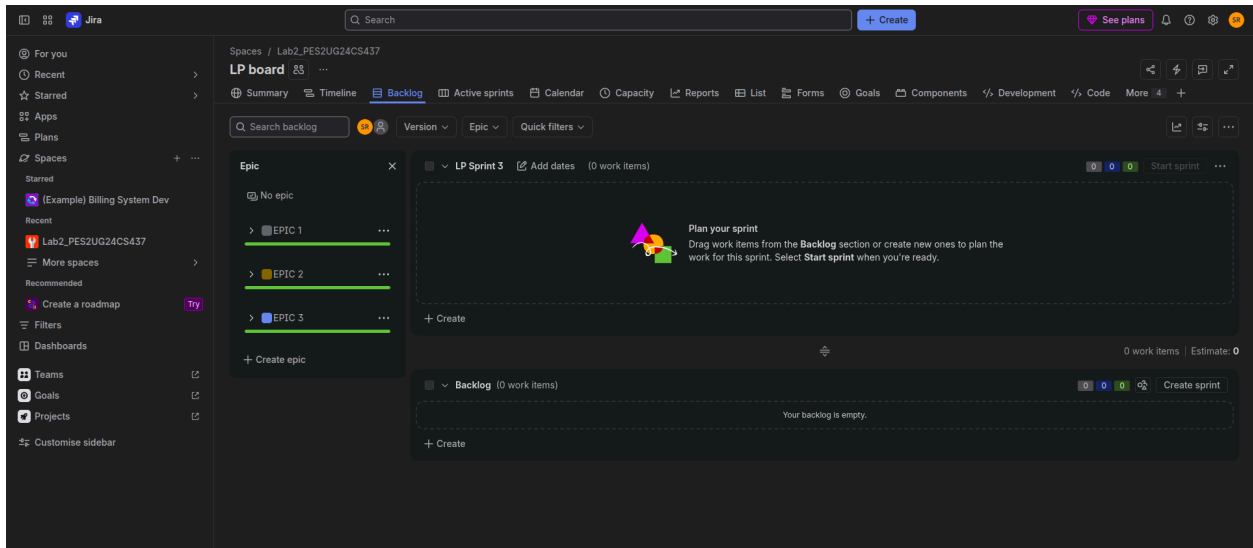

Marked all user stories in the sprint as done.

Complete the sprint.

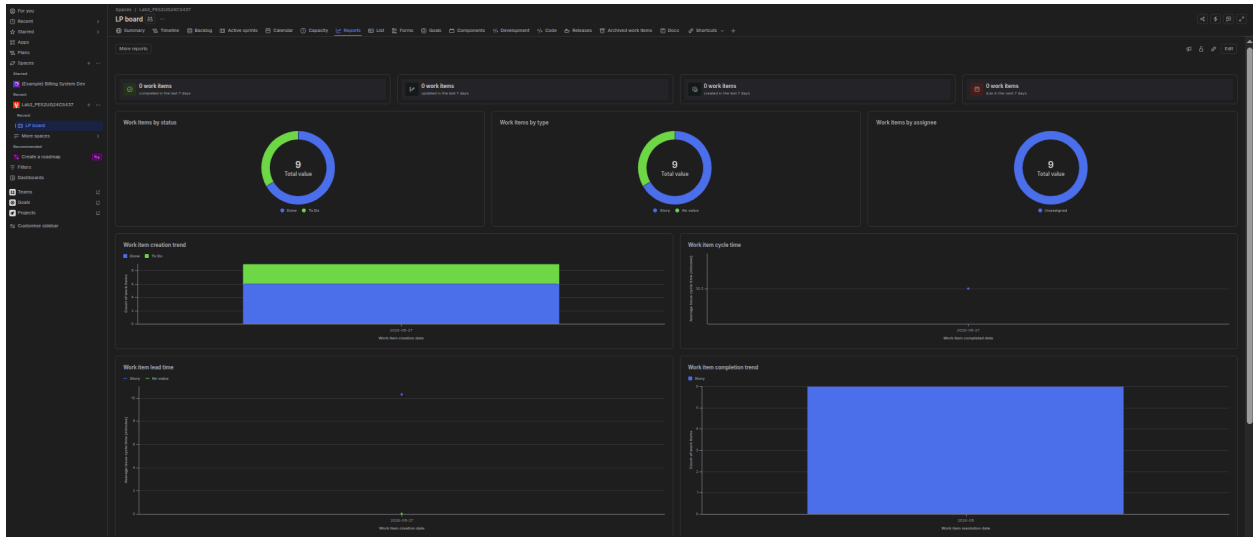

Product backlog cleared, all epics finished.

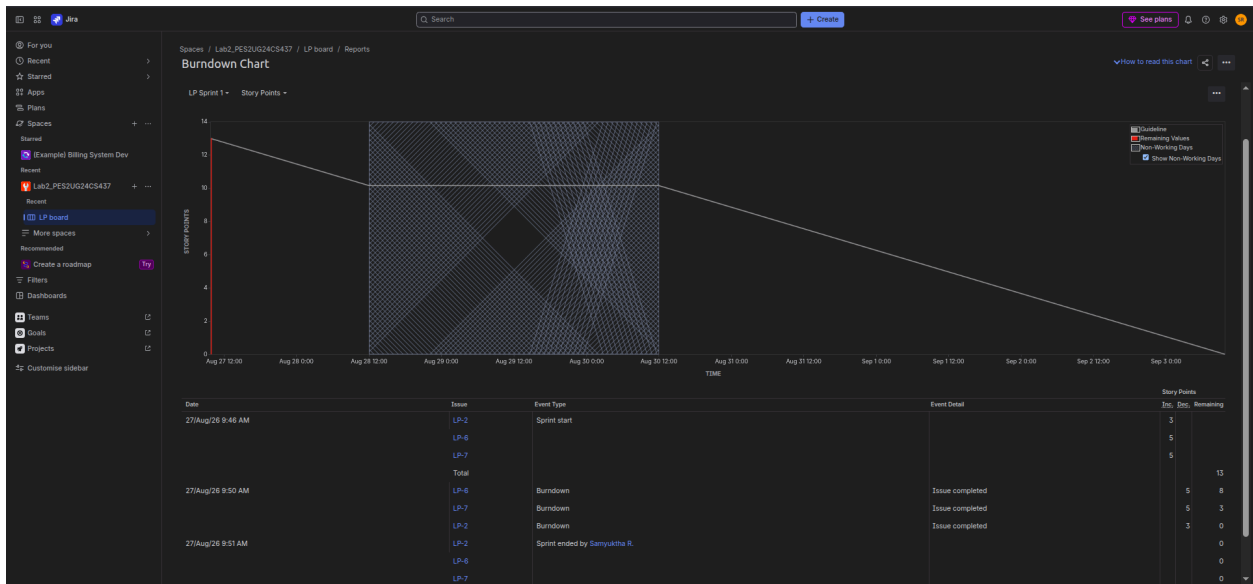

7. View burndown chart

Overall report for all the user stories.

Burndown chart for sprint number 1.

Burndown chart for sprint number 2.
