

Problem statement #3 - Campus Placement & Internship Pipeline

The campus placement cell manages hundreds of corporate drives with varying eligibility criteria. The platform must parse student resumes, apply multi-tier CGPA and backlog filters, manage multi-round interview queues, and process offer letters.

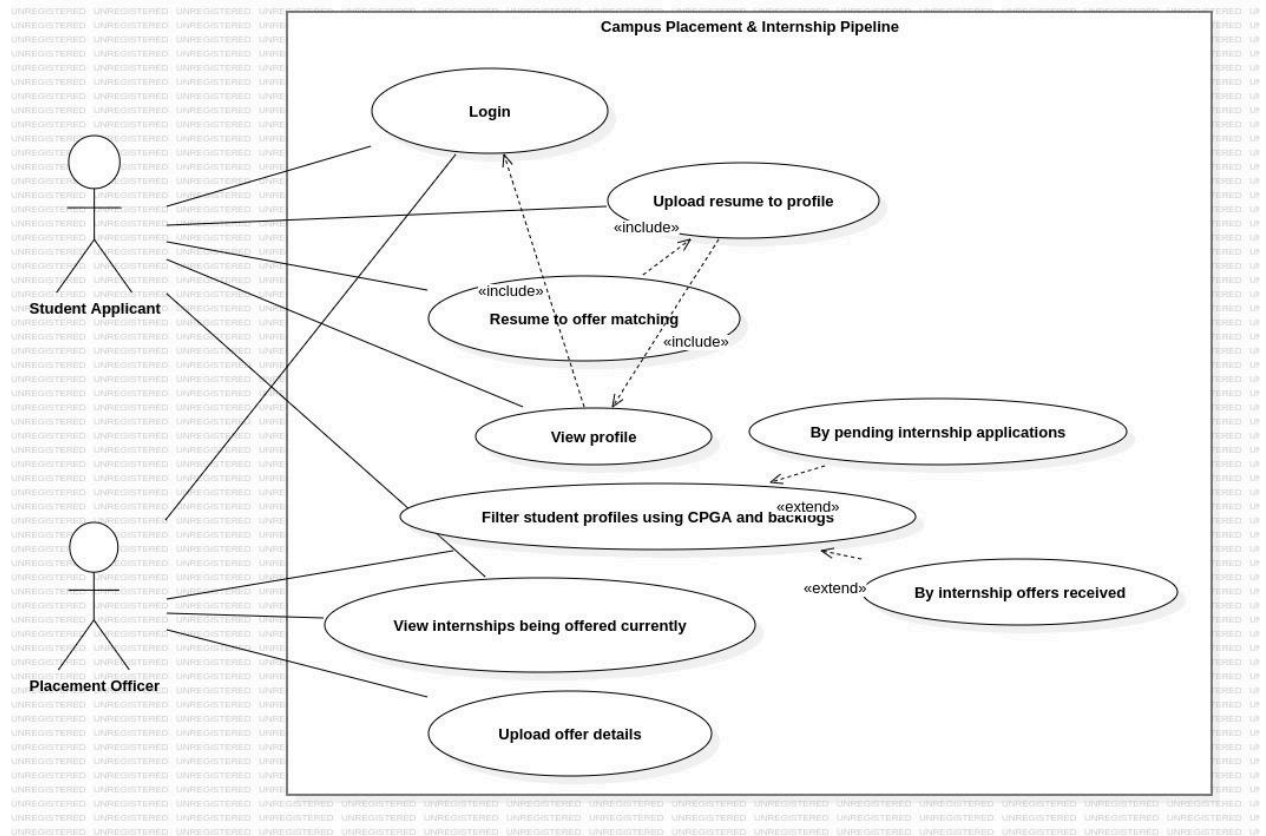

Requirements table

Req ID	Type	Description	Priority	Acceptance criteria	Rationale
FR-001	Functional	Parse uploaded student resumes (PDF format), extract skill tags, and match profiles against active company eligibility rules.	High	Pass: Ineligible applicants are filtered out with clear discrepancy reasons; Fail: Applicant with active backlog bypasses eligibility filter.	This exists to match a student to a placement offer that would be a good fit for them.
FR-002	Functional	Process uploaded offer letters, extract company that offered the letter and to whom, length of internship, stipend.	High	Pass: All the mentioned data points in the description are extracted from the offer letters. Fail: Not all were extracted.	This exists for the placement office so that they can easily see who has been offered what internship. This will help in statistics at the end of the placement round for the year.
FR-003	Functional	Maintain student profiles which	High	Pass: All the mentioned data points in	This is the mechanism to maintain

		keep track of information such as CPGA, active backlogs, status of attempted placements (OA stage number, interview stage number), active offers, accepted offers.		the description are maintained for every student in the placement process. Fail: Not all are seen.	the multi-stage interview round status for the students partaking in placement, and also facilitates the background check in the resume and offer letter matching so that students with invalid criteria are not mapped to certain offer letters.
FR-004	Functional	Filtering applicants by CPGA class (S, A, B ... F) and backlog status (number of backlogs, status).	High	Pass: Students within the CGPA range for a certain class are the only ones that show up after filtering.	This will help the placement office to run statistics later, as well as help in the background check in the resume and offer letter matching so that students with invalid criteria are not mapped to certain offer letters.
FR-005	Functional	Allow placement office to upload details of the internships companies are offering along with	High	Pass: Every offer in the system has the corresponding information: document of description, CGPA	The placement office should have a central area to view all companies and the internships

		the email/document sent to describe the internship.		criteria, year criteria. Fail: Any one of the above points is missing.	they are offering.
NFR-001	Nonfunctional	The system shall encrypt all student academic records and offer documents at rest using AES-256.	Medium	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	This ensures privacy of the documents in the case of a breach of the system.
NFR-002	Nonfunctional	For a single resume, parsing, verification of eligibility and matching to an offers should happen within 30 seconds.	Medium	Pass: Time taken is less than or equal to 30 seconds. Fail: Time taken is more than 30 seconds.	This aims to make the matching process efficient.

UML use-case diagram

Use-Case Flow Specification

Use Case	Upload resume
Actors	Student applicant
Main Flow	1. Log in with valid credentials 2. Navigate to profile 3. Click the upload resume button 4. Select file from computer to upload 5. Click upload 6. Receive upload confirmation message.
Alternate flow	In step 5: Invalid file uploaded 5a. Current upload is cleared by the software. 5b. If the file is a pdf, receive a message to upload only pdf files. 5c. If the file contents are not recognized to be that of a resume, receive a message stating the same. 5d. Dismiss the message 5e. Click upload resume to reupload a new file.
